

Onsite with Quilpie Shire Council

Driving Asset Excellence

RACAS[®]
POWERED BY SHEPHERD

road asset condition
assessment system

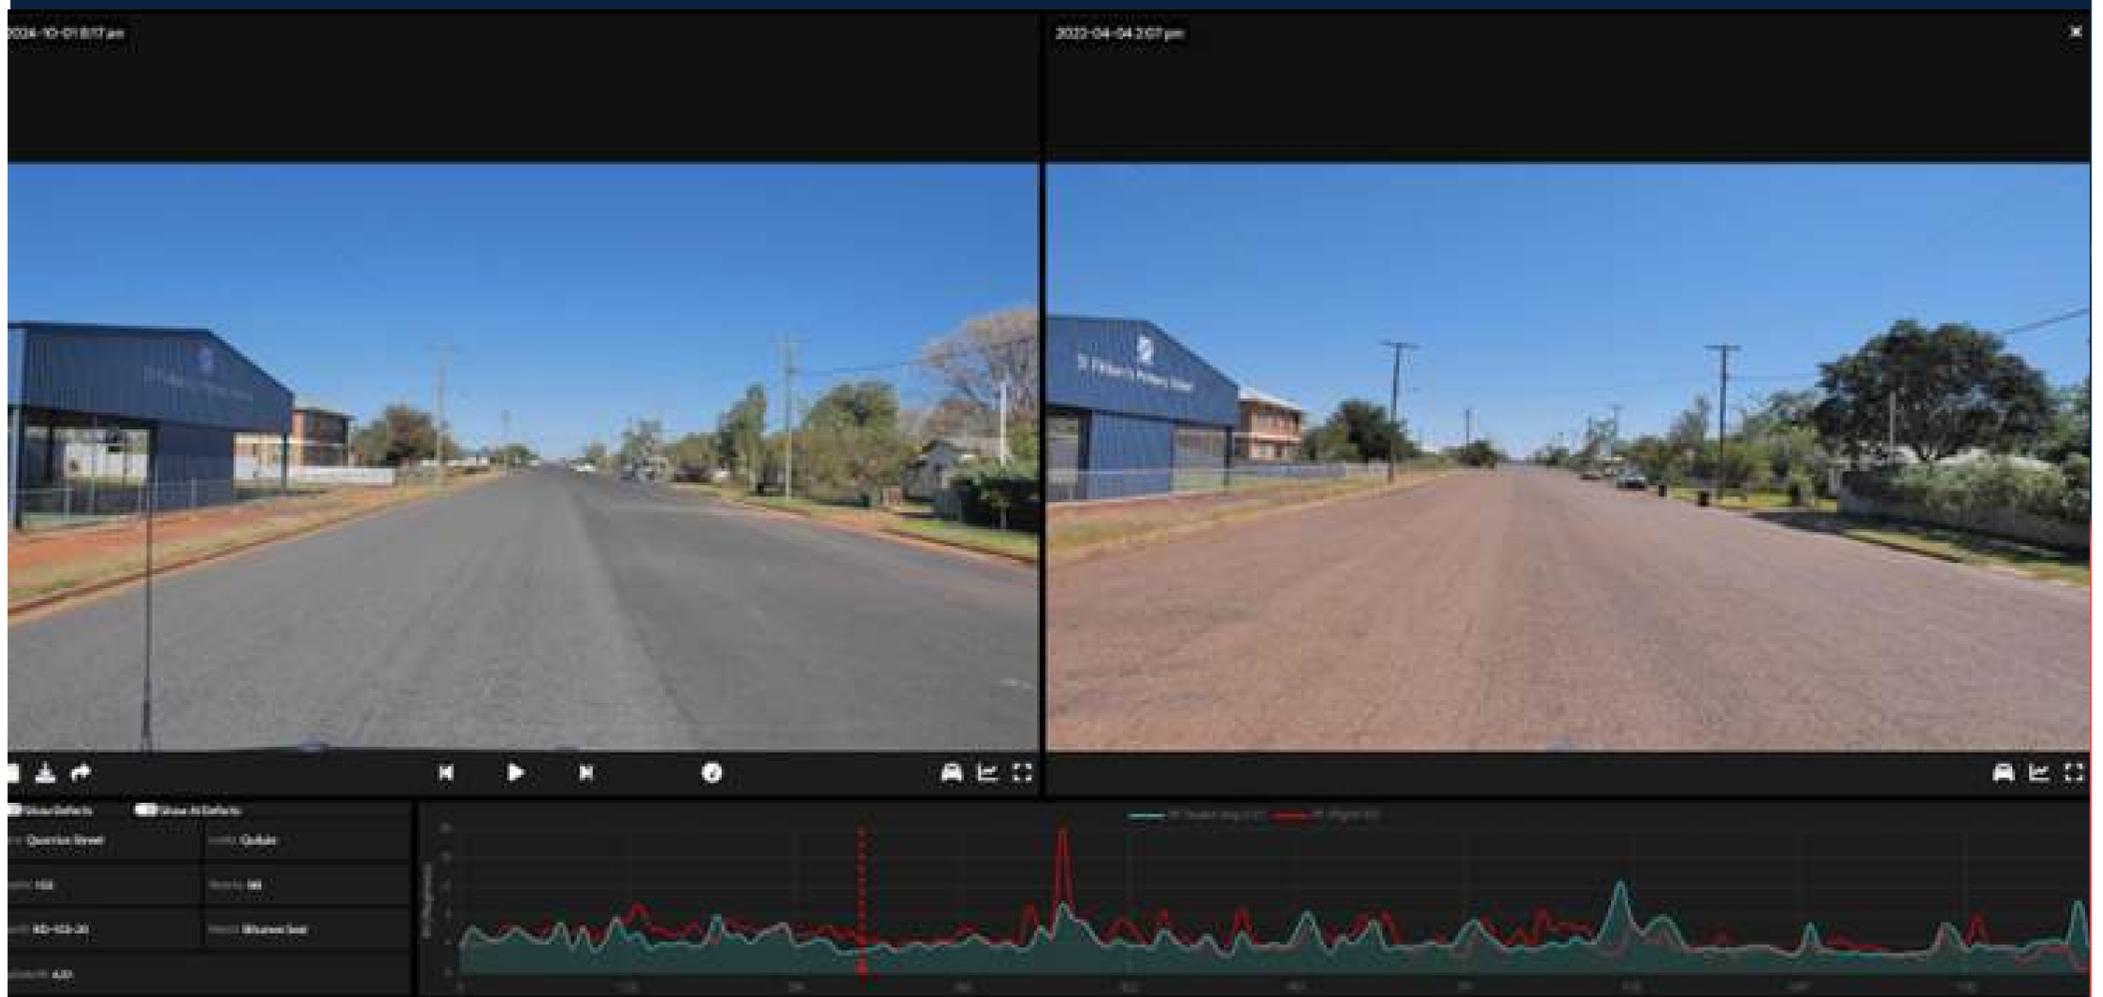

Using its RACAS data Council leveraged our expert analysis to:

- Pinpoint defects
- Create data-driven condition profiles
- Prioritise works

Side By Side Comparison

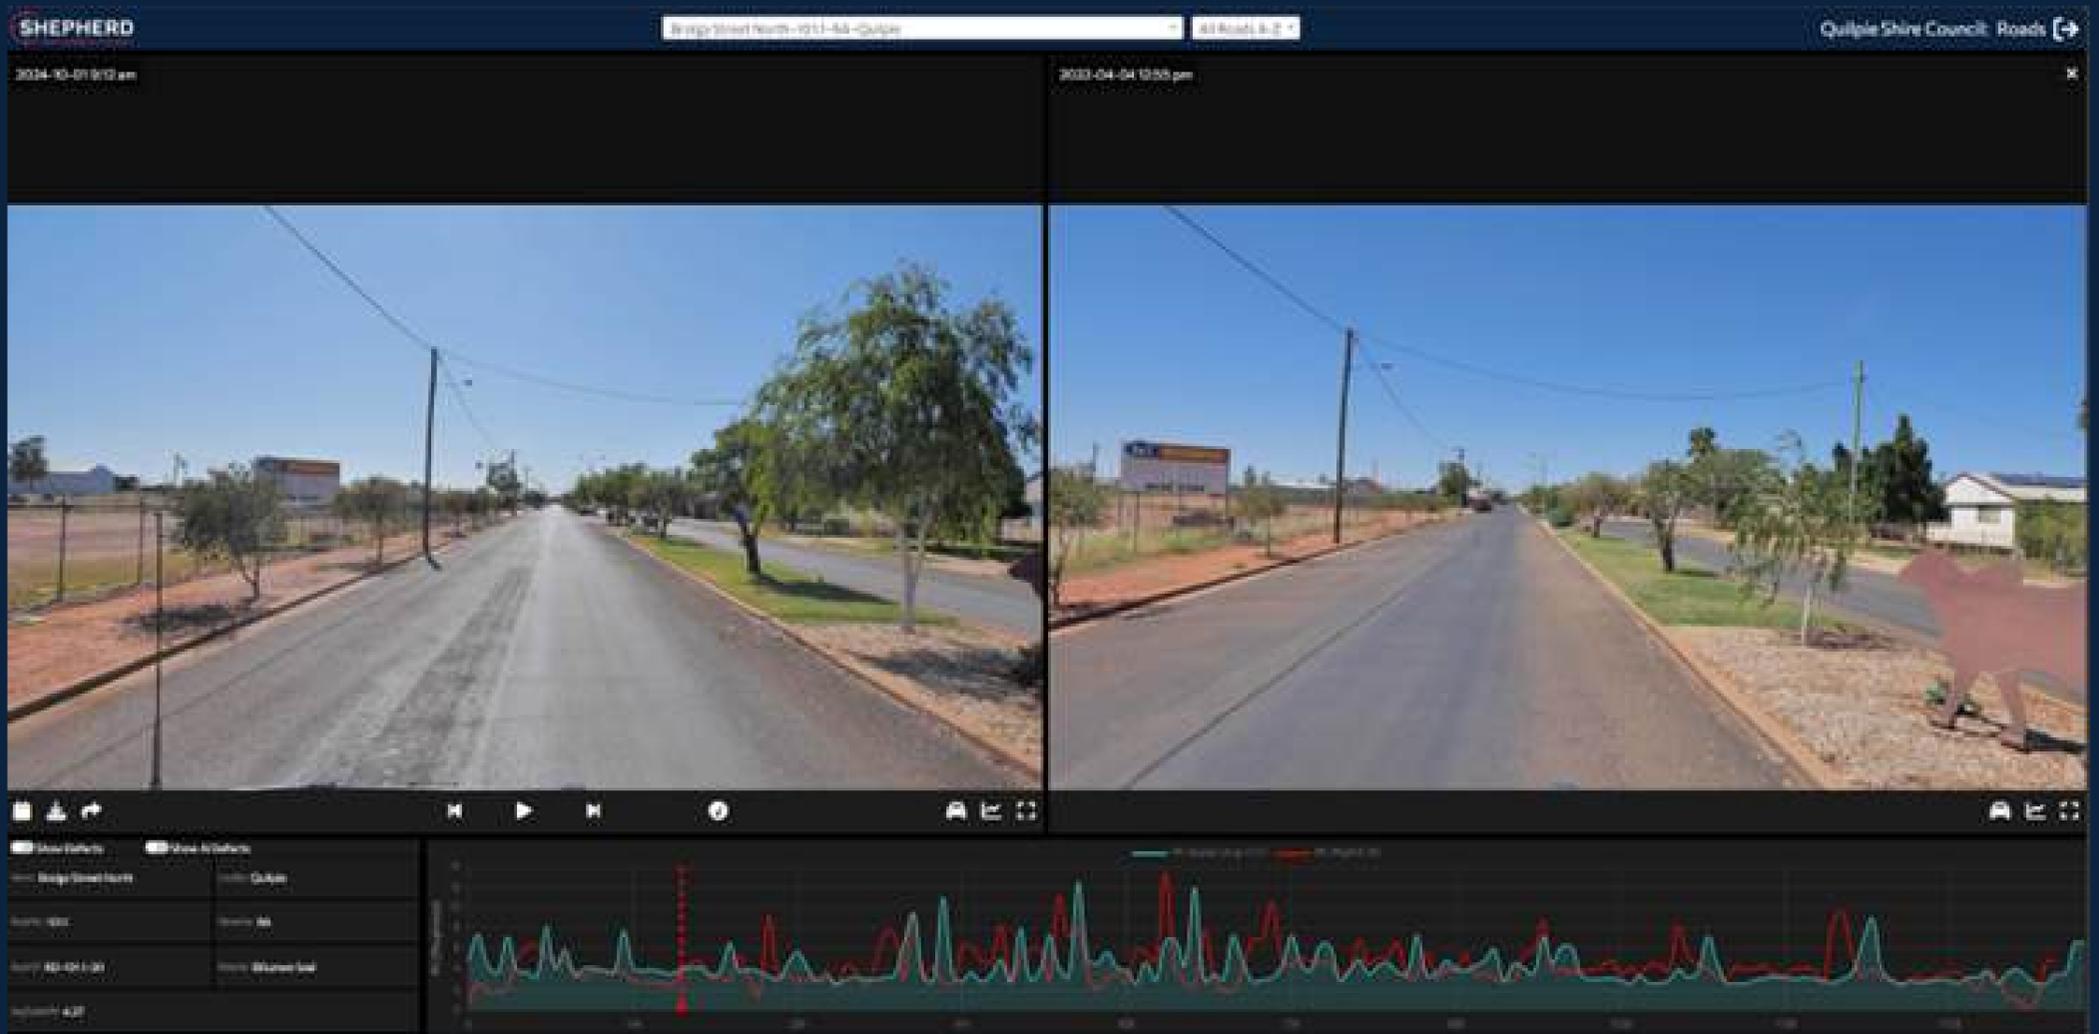

SHEPHERD has captured Quilpie's road network 3 times and this history now provides great insights.

Council is able to compare images side-by-side in the RACAS road-viewing software to track deterioration and improvements.

For example, this image shows a reseal has occurred in the last 2-years, providing a good baseline to review in the future and monitor the life of the reseal.

Evidence Based Insights

RACAS is perfect for evidence-based decisions, ensuring the Quilpie community benefit from well-maintained and improved roads.

For example, this image shows the deterioration of mild rutting within the wheel path has turned into a failure over the 2-year period between RACAS Road Surveys.

Data Driven Planning

This image shows significant improvements in the road's surface after Council's recent works.

The graph highlights the difference in roughness — with clear progress from 2022 (red) to 2024 (brown).

Evidence-based maintenance making a real impact!
